

Tray Extenders

Tray Extenders

Figure A

Tray extenders are pieces of wire 48 inches long, that wrap around and weave into the trays effectively increasing the racks drying capacity. any number of tray extenders can be used on a tray. Tray extenders can only be mounted on either the sides or the front. The sheet cannot hang over both the front and sides as the Rubber Feet would fall on the sheet being dried.

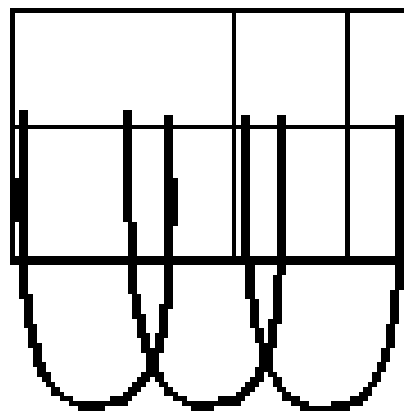

Figure B

Tray Extenders weave into the tray, figure A. Pass the extender over the outside wire (1), under the next interior wire (2) and hook on the second internal wire (3). Several extenders can be mounted to accommodate different sizes (figure B). Two ends can be placed closed together for a long reach, or farther apart for short support. It is advisable to have at least two extenders supporting the sheet.
